## Photomultiplier tube PMT-119

The photomultiplier PMT-119 has a translucent antimony-potassium-sodium-cesium photocathode with spectral characteristics in the area of 300 is 850 nm, the electrostatic focusing of electrons, flat face optical input, 12-dynode multiplied system of louvered type and reflex output; made in glass-to-metal shell filled with polyurethane foam dielectric housing with a flexible wires. The photomultiplier is used in radio electronic devices of general application to convert light signals into electrical.
