

## Photomultiplier tube PMT-110

The photomultiplier PMT-110 has a translucent antimony-potassium-sodium-cesium photocathode with spectral characteristics in the area of 300 to 900 nm, the electrostatic focusing of electrons, 12-dynode multiplied system of louvered type, flat face optical input and reflex output; made without socle design with tough wires. The photomultiplier is used in electronic devices of general application to convert light signals into electrical.
